

TRAVERSAL

The restriction between Groups I-II is traversed because Groups I and II contain a corresponding technical feature. Claim 2 of Group I and Claim 5 of Group II both recite forming a dislocation structure whose dislocation density is measured with the transmission electron microscope and is from 1×10^4 to $9 \times 10^{13} \text{ cm}^{-2}$. In light of the shared technical feature, a search of Groups I-II would be coextensive and not overly burdensome. For this reason, the restriction is requested withdrawn, and examination of Claims 1-6 requested.

Respectfully submitted,

HAHN & VOIGHT PLLC
